

GENUS: *NANNOCALANUS*

Prosome and pedigerous segment 1 fused in male and female. Otherwise very similar to *Calanus*. Right and left spermathecae fused on female genital segment. Male antenna 1 segments 1-2, 3-5, 24-25 fused. Male right leg 5 like other swimming legs, i.e., with setae on the inner border of the exopod, left endopod without setae, left exopod with outer edge spines greatly elongated.
