

GENUS *UNDINULA*

Prosome and pedigerous segment 1 fused. Posterior corners of pedigerous segment 5 extend into 1 or 2 points. Mouth parts similar in both sexes: Maxilla 2 inner lobe 1 with 6 setae. Swimming leg 2 exopod segment 2 with an invaginate outer proximal border in both sexes. Leg 5 basipod segment 2 with the inner border naked in both sexes. Female leg 5 endopod with 7 setae; those on segment 1 and 2 spine-like. Male left leg 5 highly modified. Outer edge spines of exopod segments 1 and 2 very elongate and segment 3 very modified; endopod absent. Male right leg 5 with both rami 3-segmented, endopod with reduced setation, exopod segment 2 with an outer distal border elongate extending as far as the first outer spine of segment 3.
